James Nguyen

[Senior Software Engineer]
Elk Grove, CA, 95624 • (518) 806 2880 • james.nguyen.950816@gmail.com

Professional Summary

Senior Data Scientist with over 10 years of experience in machine learning, data analysis, and **AI** solutions. Adept at designing, developing, and deploying advanced models that drive business decision-making and operational efficiencies across various industries, with a recent focus on healthcare applications. Expertise in leveraging big data technologies, agentic workflows, model fine-tuning, and cutting-edge machine learning algorithms. Passionate about solving complex problems using data, while ensuring the quality and accuracy of models. Strong collaborator with a proven track record of mentoring teams and effectively communicating complex analytical insights to non-technical stakeholders.

Skills

- Backend: Node.js, Python, Java
- Frontend: React, Angular, Vue
- Database: PostgreSQL, MongoDB
- Infrastructure & Tools: Kafka, Amazon Web Service, Azure, Google Cloud Platform, DataDog, Playwright, Jest, Mocha, Unit Testing, Integration Testing.

Experience

SENIOR DATA SCIENTIST

Accenture | United States | Remote

08/2022 ~ 11/2025

- Delivered major enterprise-level platforms within the company's Technology Pattern
  - First Project name
    - Led the development of machine learning models for business-critical applications, including predictive models that improved healthcare operational efficiency by 25%, leading to better decision-making and resource allocation.
    - Designed and deployed deep learning models using **TensorFlow** and **PyTorch** to optimize data-driven workflows, resulting in a 30% reduction in model inference time.
    - Utilized RAG techniques to enhance language model performance, ensuring that models could effectively access external knowledge and improve their predictive capabilities.
    - Collaborated with cross-functional teams (software engineers, product managers, business analysts) to integrate **AI** solutions into existing systems, driving a 15% increase in system reliability and uptime.
    - Developed agentic workflows that leveraged **AI** agents for autonomous decision-making tasks, significantly reducing human intervention and speeding up time-to-decision by 40%.
    - Conducted extensive data cleaning and preprocessing to ensure the integrity of datasets, addressing issues such as missing values and outliers, which improved model accuracy by 20%.
  - Second Project name
    - Fine-tuned pre-trained models to align with specific business requirements, ensuring that the models remained optimal for diverse healthcare datasets and real-world applications.
    - Developed and implemented **scalable data pipelines**, utilizing Hadoop and **Spark** for processing large healthcare datasets, improving processing time by 35%.
    - Monitored **AI** model performance post-deployment, making real-time adjustments to maintain model accuracy and stability in production environments.
    - Delivered comprehensive presentations and reports to senior leadership and non-technical stakeholders, making complex data insights actionable and understandable.
    - Conducted extensive data cleaning and preprocessing to ensure the integrity of datasets, addressing issues such as missing values and outliers, which improved model accuracy by 20%.
- Delivered comprehensive presentations and reports to senior leadership and non-technical stakeholders, making complex data insights actionable and understandable.

- Conducted extensive data cleaning and preprocessing to ensure the integrity of datasets, addressing issues such as missing values and outliers, which improved model accuracy by 20%.

SENIOR DATA SCIENTIST 2

Amazon | United States | Remote

02/2020 ~ 07/2022

- Led the development of machine learning models for business-critical applications, including predictive models that improved healthcare operational efficiency by 25%, leading to better decision-making and resource allocation.
- Designed and deployed deep learning models using **TensorFlow** and **PyTorch** to optimize data-driven workflows, resulting in a 30% reduction in model inference time.
- Utilized RAG techniques to enhance language model performance, ensuring that models could effectively access external knowledge and improve their predictive capabilities.
- Collaborated with cross-functional teams (software engineers, product managers, business analysts) to integrate **AI** solutions into existing systems, driving a 15% increase in system reliability and uptime.
- Developed agentic workflows that leveraged **AI** agents for autonomous decision-making tasks, significantly reducing human intervention and speeding up time-to-decision by 40%.
- Conducted extensive data cleaning and preprocessing to ensure the integrity of datasets, addressing issues such as missing values and outliers, which improved model accuracy by 20%.
- Developed agentic workflows that leveraged **AI** agents for autonomous decision-making tasks, significantly reducing human intervention and speeding up time-to-decision by 40%.
- Conducted extensive data cleaning and preprocessing to ensure the integrity of datasets, addressing issues such as missing values and outliers, which improved model accuracy by 20%.

SENIOR DATA SCIENTIST 3

Chime | United States | Hybrid

08/2017 ~ 01/2020

- Led the development of machine learning models for business-critical applications, including predictive models that improved healthcare operational efficiency by 25%, leading to better decision-making and resource allocation.
- Designed and deployed deep learning models using **TensorFlow** and **PyTorch** to optimize data-driven workflows, resulting in a 30% reduction in model inference time.
- Utilized RAG techniques to enhance language model performance, ensuring that models could effectively access external knowledge and improve their predictive capabilities.
- Collaborated with cross-functional teams (software engineers, product managers, business analysts) to integrate **AI** solutions into existing systems, driving a 15% increase in system reliability and uptime.
- Developed agentic workflows that leveraged **AI** agents for autonomous decision-making tasks, significantly reducing human intervention and speeding up time-to-decision by 40%.
- Conducted extensive data cleaning and preprocessing to ensure the integrity of datasets, addressing issues such as missing values and outliers, which improved model accuracy by 20%.

Certifications

- **Meta Full-Stack Engineer(Coursera)**

Education

- **University of California, Berkeley** | Bachelor of Science in Computer Science | 04/2012 ~ 07/2016
